

Introduction

- Les pneumopathies infiltrantes diffuses (PID) constituent un groupe de pathologie fréquente en pneumologie, leur expression clinique riche à la fois thoracique et extra-thoracique les rend parmi les maladies les plus invalidantes.
- Le scanner thoracique de haute résolution est un élément clé dans le bilan diagnostique. Une meilleure analyse permet d'orienter le diagnostic étiologique.
- Le but de notre travail est de préciser l'apport du scanner thoracique dans le diagnostic des PID.

Matériels et méthodes

- Etude portant sur 180 dossiers des patients hospitalisés pour PID colligés au service de pneumologie au CHU Ibn Rochd de Casablanca.
- Période: entre janvier 2017 et juin 2023.

Résultats

Épidémiologie

- Âge moyen : 56 ans (24-80 ans)
- Sexe :
